**QUESTION:** I want to send someone a specific Webpage — the Verizon Email Fix — from your “FastFacts” page.

I'd like to send a reference to just that page, not the index page. How can I designate the exact page I want someone to view?

## ANSWER:

1. RIGHT-click on the reference (Figure 1).
2. Left-click on Properties (last choice).
3. Click, hold & drag across the “Address:” (Figure 2).
4. Use Ctrl+C keys, on the keyboard, to copy the address.
5. Use Ctrl+V keys, on the keyboard, to paste it into your word processor or your email.
