## QUESTION:

When I RIGHT-click on an attached PowerPoint show (.pps) file and then Left-click on "Open," I get an error message (**Figure 1**):

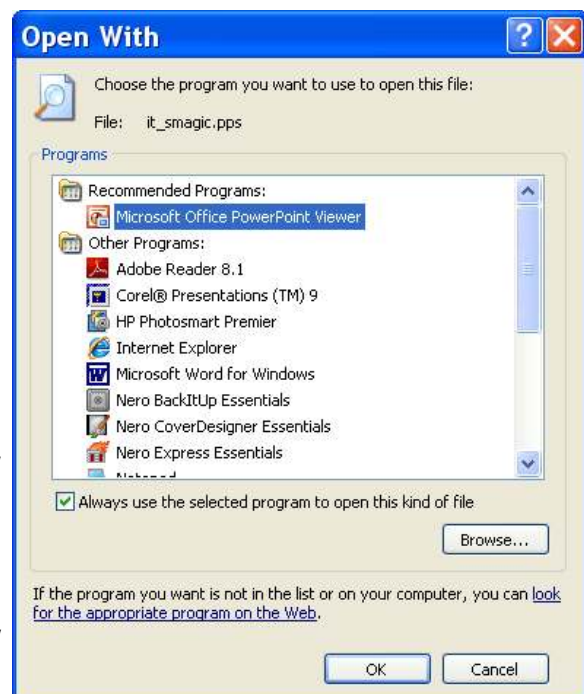

**Figure 1**

I thought I had set it up for all files of this type to be opened with the free PowerPoint Viewer (**Figure 2**).

I can't understand why it doesn't work. Any ideas?

**ANSWER:** The only way to guarantee that one can view a PowerPoint Show that is attached in an Outlook Express email is to save the show to the hard drive or external drive and play it from there. WHY? I have no idea, I just know that this procedure works.
